FUTURE OF LEARNING · 14 NOVEMBER 2026 · 1-3 P.M.

Stop Waiting for the Perfect App

Vibe Code It Together

Building private classroom tools with AI that works where you teach

Automate → **WebApp** → **Agents**

Workshop flow & tool guides

Name _____ Subject / Grade _____

BEFORE WE BUILD

Recursion, Papert and Turtle Art: see a rule take shape. With **10 Lineage cards**, take **turns** turning them over. Watch for the two jokers.

WHAT PROBLEMS DO YOU WANT TO SOLVE?

From the MIT example to thinking routines, creativity and Rick Rubin: describe an idea, look at what takes shape, then try again.

The loop Barrier → Sketch → Prompt → Build → Test Follow the presenter's pace.

01 Pitch a product — 3 minutes

Write a ridiculous word. Find someone you do not work with. **Pitch a product with that name.**

My word / product

02 Bring your real problem — 4 minutes

Write one classroom problem in a sentence. Find a new partner. **Pitch each other a solution.**

My classroom problem

03 Find the barrier

Deficit: They can't organise their writing.
Barrier: The organising has to happen in their head at the same time as the writing.

What part of the task or design could I change?

04 See what can run itself

Automate Apple Shortcuts

Watch the student notetaking example: notes → shortcut actions → response.
Which repeated job could become an automation?

A repeated job in my classroom

05 Sketch it — 3 minutes

Rewrite your barrier, then draw boxes and arrows.
What do they **see first**? What can they **do**? What happens when they **tap**?

06 Write your prompt

Turn your sketch into instructions.

Build a single-screen tool for a Grade _____ student who _____.

Show _____ first,

then let them _____.

Keep the language at _____.

No sign-in.

07 Build 01 — 15 minutes

WebApp Gemini

One drives. One talks. Paste the prompt, try the result, describe the next change.
Your first version gives you something to improve.

What we built

08 Test 01 — 4 minutes

WebApp Swap devices with another pair. They use it cold. **You say nothing.**
Watch where they hesitate.

Where they hesitated

09 Change one thing — 4 minutes

What did you want it to do that it would not?

Substitute · Combine · Eliminate · Push It!

Choose one move. Make a change, then test it.

Our change / what happened

10 Build 02 — 8 minutes

Agents Xcode · Copilot · DeepSeek

Swap roles. Same barrier. More ambition.
Explore local files, skills and workflows through the demonstrations and your configured tool.

What could we try next?

11 Continue iterating

Barrier → Sketch → Prompt → Build → Test.
Keep a useful change, then go round again with your team.

My next problem / next step

Warm-ups: *Creative Hustle*, Olatunde Sobomehin & Sam Seidel. No coding background needed; a completed app is not promised.

KEEP THIS SIDE BESIDE YOU

Describe. Try. Notice. Iterate.

One classroom barrier. Three ways to explore it.

Automate → WebApp → Agents

Automate Apple Shortcuts

A REPEATED JOB ON YOUR DEVICE

WATCH, THEN TRY A SMALL ROUTINE

1. Open Shortcuts. Start with a repeated job and identify the input, the actions and the result.
2. Describe the routine using the workshop setup, or assemble its actions. Check each action before running it.
3. Try it with sample material. Read the result and change one action or instruction at a time.

Apple Shortcuts guide

FOLLOW THE CLASS NOTES DEMONSTRATION

> Notes and a recording → shortcut actions → suggested missing key points → response back in the notes.

Notice what goes in, which model processes it and where the response goes. Check whether a model step uses the device or a cloud service.

The online guide practises the same loop with a meeting-summary example. AI features depend on your device and setup; follow the demonstration if yours is not ready.

WebApp Chatbots · Gemini

BUILD 01 · 15 MINUTES
TEST · 4 MINUTES

MAKE THE SMALLEST USEFUL TOOL

1. Open Gemini and choose Canvas, following the online guide. One partner drives; the other talks.
2. Paste your prompt spine from the front. Describe the learner, what they see first and what they can do.
3. Try the preview. Ask for one change in plain language, then try it again.
4. Swap devices. Let another pair use it cold. Say nothing and watch where they hesitate.

Gemini WebApp guide

THE DEMONSTRATION: TURTLE ART

> Build a Turtle Art coding platform with sequence steps and loops. Make the blocks easy to drag and drop on a mobile device.

The online guide uses a maths scaffold as another example. Use your own barrier and sketch for today's build.

CHANGE ONE THING · 4 MINUTES

Substitute one part. **Combine** useful parts.
Eliminate something. If it works, **Push It!**

Example follow-up: "Make the next action clearer and add a reset button. Keep the rest the same."

Agents Same barrier. More ambition.

BUILD 02 · 8 MINUTES
THEN KEEP ITERATING

EXPLORE WITH THE PRESENTER

Xcode · Copilot · DeepSeek

1. Swap roles. Use a workshop-configured tool or follow the demonstration.
2. Ask what the agent can work with in this setup. Give it a small, clear task using sample files.
3. Inspect the proposed change. Run or open the result, test it, and describe the next change.

Xcode Agents starter guide

THREE CAPABILITIES TO LOOK FOR

Access Local Files - work with project material where the tool and permissions allow.

Create Skills - capture repeatable instructions and resources for a task.

Automate Workflows - connect steps into a process you can inspect and repeat.

> "Explain this project in plain English. Suggest one small change that addresses our barrier. Tell me how we can test it."

Capabilities vary by tool, setup and permission. The starter guide covers Xcode orientation; detailed regional-agent setup and separate Copilot and DeepSeek walkthroughs are still to come.

Keep student work safe

- Use invented or anonymised sample material.
- Check which files, model and cloud services are involved.
- Check accuracy and behaviour before students use it.

A useful first version is enough

Keep the task small. Test the confusing part. Save a version before a large change.

If setup gets in the way, work with a partner or follow the demonstration. Bring the next question to your team or Technology Coach.

OPTIONAL EXPLORATION

Flint K12 · GitHub Pages · Vercel · App Store

THE WORKSHOP, IN YOUR BROWSER
